Retinal Photography

The **TOPCON RETINAL CAMERA** allows us to take a picture of your retina. This technology helps the doctor evaluate the appearance and health of the back of your eyes and serves as a baseline for future comparison.

These instruments assist in the early detection of many eye disorders including glaucoma, tumors, retinal detachments, and other conditions. When detected early, treatment is more effective and vision loss may be prevented. They also help the doctor search for early signs of systemic diseases like high blood pressure, diabetes, elevated cholesterol, etc.

The tests are important for patients of all ages, but especially for those who have:

- ✓ Headaches
- ✓ See flashes of lights or floating spots
- ✓ A history or family history of **Diabetes, High Blood Pressure, High Cholesterol** or Circulatory problems
- ✓ A history of eye injuries
- ✓ A strong eyeglass prescription
- ✓ A history or family history of eye disease like **Glaucoma**

The doctor strongly recommends that all patients choose to have retinal photography as part of their annual eye exam.

The photographs take just a few minutes and may or may not require any drops.

There is an additional charge of \$25.00 for the retinal photos.

Please check the appropriate line below and sign at the bottom.

- I DO want the retinal photos.
 I DO NOT want the retinal photos.
 UNDECIDED; would like to discuss with doctor.
